

Guide for the using the NHSEI antibiotic work searches in Emis Web

Emis Web searches are sent via a compressed zipped file, save that file to your desktop. Right click the file and select “Extract All”, make sure it is going to save to the desktop and click “extract”.

Select your folder and click Import

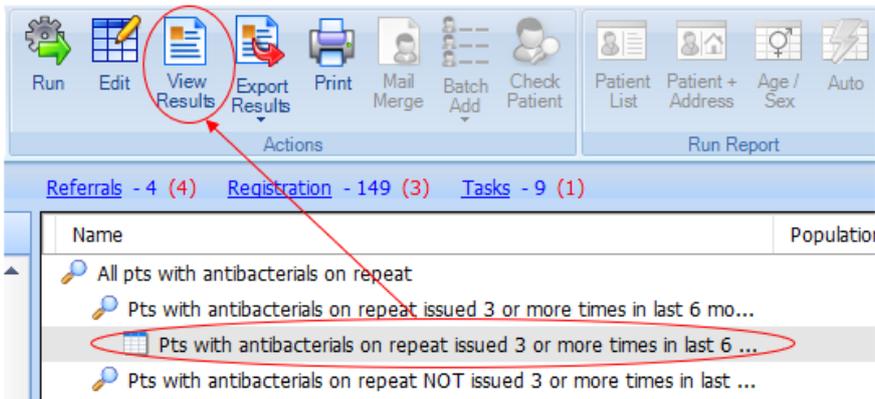

This is what the imported searches look like. Run the searches.

Emis Web updates immediately, so if you have made changes to patients records you can run the searches again and get the up-to-date results.

All the searches are relative, meaning the search period moves on a day at a time. Auto reports have been created for all of the searches and you can view the results.

Most searches have an auto report attached.

This is what you'll see.

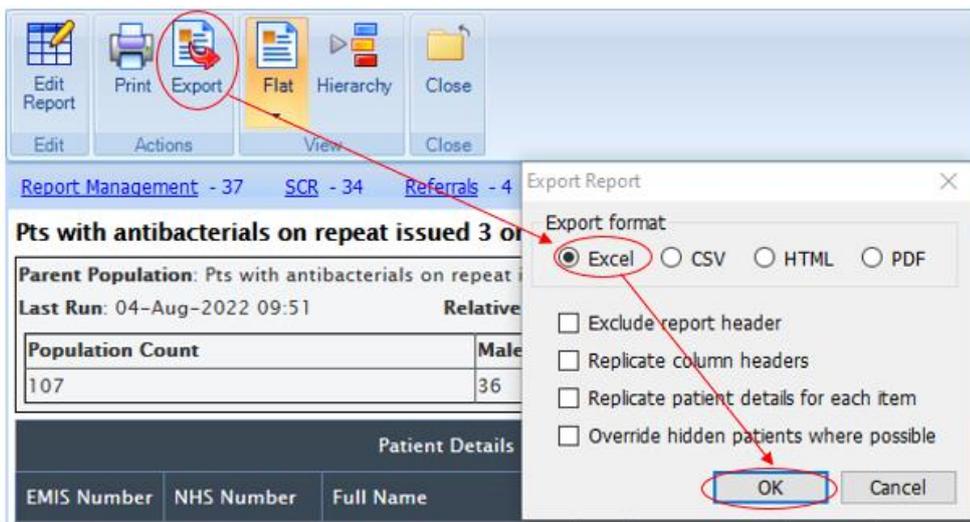

Pts with antibacterials on repeat issued 3 or more times in last 6 months Auto Report

Parent Population: Pts with antibacterials on repeat issued 3 or more times in last 6 months
 Last Run: 04-Aug-2022 09:51 Relative Date: 04-Aug-2022 09:49
