

DIAGNOSTIC

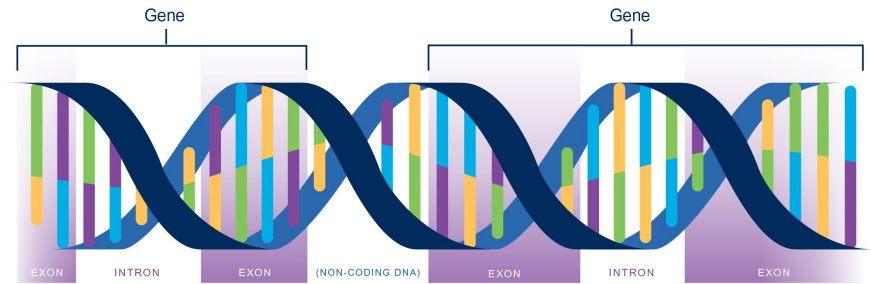

WHOLE GENOME
Testing whole genome, including coding & non-coding

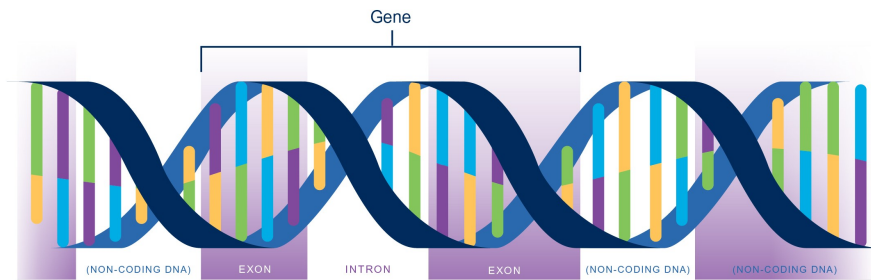

WHOLE EXOME
Testing whole genome, but only coding or exon DNA

TARGETED PANEL
Testing one or multiple genes (up to 100) in coding & some non-coding DNA

SINGLE GENE
Testing coding & some non-coding DNA for one single gene

PREDICTIVE

Targeted testing for genetic alteration (1 or more base pairs) within a gene which has already been identified in another family member e.g. a change in a single base pair resulting in variant BRCA1
